

5-V/100mA Low Power Low-Drop Fixed-Voltage Regulator WITH LOW CURRENT CONSUMPTION

The IZE4266-2 is a monolithic integrated low power low-drop fixed voltage regulator **5V/100mA** with low current consumption and inhibit input. The IZE4266-2 is specially designed to create power source with 5V output voltage, loads up to 100 mA and drop voltage less than 0.5V. The regulator is designed to supply electronic device in automotive applications and some another applications. The IZE4266-2 is equipped with additional protection against overvoltage of both polarities, load current limitation, short-circuit and overtemperature shutdown of output voltage. The IC is supplied on wafer (unpackaged) form.

Features

- Output voltage tolerance $5\pm3\%$;
- Low-drop voltage;
- Current capability up to 150 mA;
- Very low current consumption;
- Overheating protection;
- Reverse polarity proof;
- Junction temperature -40 до +125°C;
- Suitable for use in automotive electronics;
- Short-circuit proof;
- Inhibit input
